

MANIFESTO

Deep.Circle supports the development of future DeepTech Champions in Europe

The Deep.Circle community is an exclusive group of decision-makers that shares the same principals, such as responsibility for own actions, make things happen-mindset, awareness of societal and environmental issues, and collaboration and support among community members and their initiatives; aiming to reduce the time to market for DeepTech innovations.

Taking responsibility for Deep Tech

We are pretty much aware of the concerns that deep technologies, such as AI, Blockchain or IoT, are raising up. We want to hinder society of becoming a *Black mirror* chapter. We deal with ethical, educational, and competitiveness questions in an inclusive manner. Our recommendations are result-oriented, and are the outcome of very curated analyses lead by entrepreneurs, industry leaders, researchers, politicians, and even next generation representatives.

An engaged community as pillar

Deep.Circle looks to retain and engage its members and to attract new ones. For attaining our objective of supporting an ethical and responsible use of deep technologies, sharing is key. Sharing ideas, knowledge and data enables a hands-on attitude that boosts the creation and development of European DeepTech champions.

Passion for building European Champions

Since the Deep.Circle aims to create a valuable and engaged community of deep tech lovers, there are certain aspects that we strongly embrace, for instance being honest, open, respectful and with ambition for going forward.

Conclusion

Bringing the best people, technology and ideas together to strengthen EU DeepTech Champions. Do what you love, cherish the people you are collaborating with.
